

Good afternoon, my dear professors:

it is really a great honor for me to be here to have this opportunity for an interview. To be frank, I would like to answer whatever you may raise and I hope I would give everyone here a good impression. Firstly, please allow me to introduce myself. My name is Lijiustc, I'm 21 years old. I come from Sichuan Province. Now, I am a senior student of University of electronic science and technology of China, UESTC. And I will receive my bachelor degree after my graduation in June, 2011.

I am open-minded, quick in thought and very fond of FPD, the flat plane display. In my spare time, I like to broad interests like many other youngsters. I like reading books, especially those about FPD. I have a comparative good command of network application and I am able to operate the computer well. Besides, I am skillful in searching for information on the net. I know how to get a balance among study, entertainment and work.

In the past 3 years, I spend most of my time on study and have passed CET4 and CET6 with excellent performance, and I've passed the National Computer Rank Examination, NCRE Band II and III with ease. At present, I have acquired a basic knowledge of my major, which have laid a solid foundation for my future study and research. Besides, I have also join in Scientific Research Activity and won some prizes. Taking the National Mathematical Contest and the Mathematical Contest in Modeling as examples, I have won The First Class Prize of the Mathematical Contest of our school and The Second Class Prize of Sichuan Province. In Modeling Contest, I presented my University with other two classmates, and in the end, our team got The Third Class Prize of Sichuan Province. These activities not only have broaden my horizons and formed good studying habits of integrating theory with practice, but also improved my physical handling and innovating ability. Due to my excellent performance I had won The National Scholarship for two times.

If luckily I get the chance to enter Beijing University and have a further study at Physical college, which I have desired for a long time, I will concentrate on the study and research in the optical field. First I will spare no effort to learn the theoretical knowledge in order to construct a solid base for my future work; second I would like to do some practical work with the help of the supervisor and classmates. And through this, I can get something that cannot be acquired from the textbooks. I believe after 3 years of learning, my dream will finally come true. And if possible, I want to go on with my study for doctorate degree,

I am longing for my postgraduate studies and life. I will soon prove that your decision of choosing me is the wisest. En``that's all, Thank you for giving me such a valuable opportunity! Thanks for your time!
